Q1

Advantages: Easy to read, easy to write, not need to close tags, syntax is based on indentation like python. Disadvantage: Need time to generate dynamic content. It also makes it hard to nest things in such a way that only the outer part of markup differ, with common inner content.

Q2

You cannot see real web page by using CLI and only can know if it is right. This is faster than Web testing.

Q3

There are no big different with small Web application, and I think Web testing is better than CLI with cucumber since CLI testing have to write a lot of codes. But for very large Web application, CLI is much faster than others methods and it worth to use it.
